

Figure 10 displays global maps of temperature anomalies and differences between MTWA and MTCO at four different time points: 6 ka, 97 ka, 116 ka, and 127 ka. The figure is organized into a 4x3 grid. The first column shows MTCO (°C) anomalies, the second column shows MTWA (°C) anomalies, and the third column shows the difference (MTWA - MTCO) in °C. Each map uses a color scale from -5 to 5, with blue representing negative values and red representing positive values. The maps show significant spatial variations in temperature anomalies, particularly in the Northern Hemisphere, and the differences between MTWA and MTCO are generally small, indicating a high degree of agreement between the two datasets.
